

# MECHANICAL CARBON

carbons for EDM electrical discharge machining

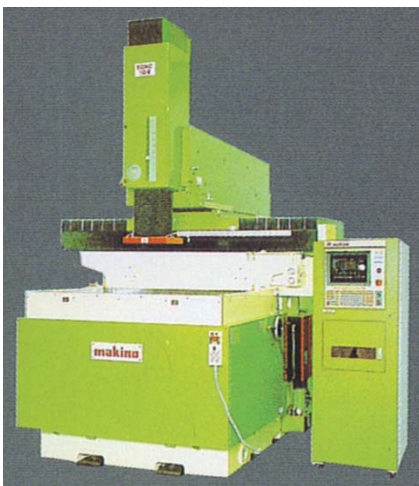

Morgan Industrial Carbon supply a wide range of products suited for EDM applications

Due to extra-ordinary properties, graphite is an ideal electrode material and has made a considerable contribution to the rapid development and expansion of the EDM process.

In many fields of production and tool manufacturing, graphite today forms the basis for cost effective use of this modern machining process.

The advantages of graphite materials are

- High material removal rates
- Low wear
- Readily machineable into electrode shapes
- Fine finish of components
- Graphite used for EDM is of a purity that is inert therefore no special safety has to be observed for their machining.

Morgan Industrial Carbon supplies graphite block and rod material, to various sizes, as required. When ordering please advise if a fine ground finish or rough saw cut finish, is suitable for your application.

Call Morgan Industrial Carbon for all requirements.....
